**Office of Trade/Trade Policy and Programs
Intelligent Enforcement Subcommittee
Intellectual Property Rights Working Group
June 2023**

Action Required: Informational

Background:

- In late October 2020, U.S. Customs and Border Protection (CBP) asked the Commercial Customs Operations Advisory Committee (COAC) to further develop, expand upon, and align three previous recommendations: Sharing Detention Information, Photographic Standards Guide, and Data-Driven CBP Seizures Process.
- The Intellectual Property Rights (IPR) Working Group (IPRWG) met regularly starting in October 2020 to discuss implementing solutions to the recommendations and, in early 2021, went on hiatus to reorganize and allow CBP to implement some of its recommendations.
- The IPRWG reconvened as part of the 16th term of the COAC to identify opportunities to enhance trade and CBP practices, policies, and programs for interdicting violative counterfeit goods.

Issue:

- During Fiscal Year 2022, CBP seized nearly 25 million counterfeit goods that would have had a manufacturer's suggested retail price of nearly \$3 billion had they been genuine.
- To further progress in the IPR space, the IPRWG is focusing on automating the detention process and improving communication between rights holders and CBP.

Current Status:

- Since reconvening, the IPRWG has met regularly to discuss pragmatic and practical recommendations for improving communications among CBP, rights holders, and importers and to develop strategies for streamlining the seizure process.
- CBP and the IPRWG are working together to gather more detailed feedback. Discussions continue on how CBP can implement the recommendations the IPRWG made at the December 2022 Public COAC meeting:
 - Create a single, bidirectional automated system for CBP's detention and seizure process that would allow electronic notices of detention and include a unique identifier to act as a reference number throughout the entire importation process.
 - Develop an enhanced communication capability for interested parties to enable direct and confidential communications between CBP and interested parties. This capability would include:
 - Password-protected accounts that allow access to notifications, images, and information exchange;
 - A search mechanism for importers and other interested parties to track CBP actions through the entire enforcement process using a unique identifier; and
 - The ability for appropriate parties to provide permission or request manipulation or abandonment of goods.

Next Steps:

- CBP will advise the IPRWG of updates to the automation of detention.
- CBP will continue to discuss IPR enforcement processes and communication tools.
